ezPDF Reader (Android) Brief Guide

FAQ (Frequently-Asked Questions)

Q. Why charged twice?

A. While it may appear that you've been charged twice for an order, the pending item you noticed on your bank statement is actually an authorization. Authorizations are the initial communication between Google's billing system and the bank's billing system. While you may see multiple pending listings in your account, only one charge will be deducted after the authorization is completed. When this final deduction occurs, the charge will be posted to your account as successful. Google will not bill an account until they receive an approved authorization from the bank.

Q. Trouble downloading with "Download unsuccessful" message

A. If you receive a "Download unsuccessful" message when attempting to download an app, try the following troubleshooting steps to resolve the issue:

- For paid applications, confirm your credit card information is up to date by signing in to your Google Checkout account.
- Clear your Market cache **(visit Settings > Applications > Clear cache).**
- Restart your phone, then try downloading the app again.
- Wait 10 minutes, and try your download again.
- Confirm there is connectivity to either a wireless or cellular network on your device, and contact your mobile service provider if you aren't connected.
- Ensure there's enough space on your phone or tablet for the app to install.
- If none of the above steps work, try remounting your SD card. Visit **Menu > Settings > Storage > Unmount SD card**; then remount the SD card from the same menu by selecting Remount SD card, or restart the device if the remount option isn't available.

FAQ (Frequently-Asked Questions)

Q. Trouble downloading with "Starting download" message

A. If your application has stalled at "Starting download", please use the following troubleshooting steps to help complete your download:
- For paid applications, confirm your credit card information is up to date by signing in to your Google Checkout account.
- Cancel and restart the download.
- Restart your phone, then try downloading the app again.
- Confirm there is connectivity to either wireless or cellular networks on your device, and contact your mobile service provider if you aren't connected.
- Try your download(s) using both wireless and cellular network connections, and ensure firewalls aren't blocking access to ports required for Android Market (TCP and UDP 5228).
- Make sure your device is signed into Google Talk by following these steps:
  1. Go to your phone's app launcher, and press the Talk app.
  2. If you're already signed into Talk, press Menu, and then touch Sign out.
  3. Launch Talk again to sign in.

Q. Why you need the permission for network communication?

A. We provide a webview browsing feature to open or download PDF files from websites / FTP sites inside the app. A convenient feature to get the PDF files to My Docs folder.

Q. Why you need the permission for phone state and identity?

A. We do not collect or store any personal information from device. This permission is needed for protecting and checking the PDF files for encryption/decryption.

ezPDF Reader (Android) Brief Guide

Q. Having problem with font spacing and other font issues

A. Try to use PostScript font from the following link.
http://sourceforge.net/projects/gs-fonts/
Expand the fonts into ezPDF Reader fonts folder.
sdcard/ezPDFReader/resource/Fonts

Q. Is ezPDF Reader compatible with my Android device?

A. Obviously, we have not tried every single Android device with our app. However, we haven't had any device that is not working with our app. And there are no known compatibility issues. If you find issues, please send me more details to android @ unidocs.com.

Q. Is ezPDF Reader compatible with NOOKcolor?

A. Yes, it does. ezPDF Reader is the best selling PDF viewer for NOOK Apps. Here is an youtube video, but rooting is no longer required.
http://www.youtube.com/watch?v=tPNqa8cS0Sw

Q. Is ezPDF Reader compatible with the NOOK?

A. Our app is not designed for e-ink technology, but there is a video how our app is working on rooted NOOK.
http://www.youtube.com/watch?v=ayAcdHuI5hw
